

## WORK EXPERIENCE

*Frontend Developer - 3SHTech 2022 - present*

- Transformed a legacy wordpress website to high performing, custom built website.
  - Boosted performance metrics significantly by achieving a remarkable improvement by 48% in the performance score
  - Managed authentication protocols leveraging JWT ( JSON Web Tokens), enhancing security measures and ensuring secure user authentication across the application.
  - Developed forms with focus on accessibility, utilizing React Hook Form and Zod validations to ensure smooth user interaction
  - Implemented efficient state management using Redux Toolkit.Ensured stable and scalable state management, while RTK Query's automatic caching and simplified API reduced network requests, leading to a smoother user experience and improved performance.
- 

## 3SHTECH 2019 - 2021

*Flutter Developer - Flutter, SQFlite, Firebase*

- Worked on SuitApp, a travel planner app designed to store and organize outfit information for users.
  - Developed Nextonplate, a meal planner app that enables users to plan and organize their weekly meals efficiently.
  - Built using Flutter with SQFlite for database management, ensuring smooth functionality for adding, storing, and managing meal plans.
  - Designed the user interface to make the planning intuitive and user-friendly, streamlining the process for users to organize their data.
- 

## PROJECTS

**ASKAI** - React, Gemini API, Clerk Auth, MongoDB, React Query

- Developed a Q&A platform, using React for the frontend and Gemini API for generating intelligent responses.
  - Implemented Clerk Auth for secure user authentication, ensuring a smooth and secure login experience.
  - Utilized MongoDB for efficient storage and retrieval of user queries and session data.
  - Managed data fetching and synchronization with React Query, optimizing the application's performance and user experience.
  - Built an intuitive and interactive user interface, mimicking the real-time question-and-answer experience of Gemini.
- 

**TASKFLOW** - React, NodeJS, ExpressJS, MongoDB

- Developed a fullstack employee notes management system, by implementing role-based access control (Employees, Managers, Admins) to manage user permissions and note visibility.
  - Created secure employee login and registration functionality, ensuring weekly login for security.
  - Designed a responsive UI for desktop and mobile, enhancing usability across devices.
  - Integrated note assignment and management features, including creating, updating, and tracking notes with ticket numbers and timestamps.
- 

**NETFLIX-GPT** - React, Firebase, Redux, OpenAI API

- Built a NetflixGPT Clone using OpenAI API to generate personalized movie suggestions based on user preferences.
  - Integrated Firebase Authentication to manage secure user sign-in and account management.
  - Leveraged the movies API to fetch and display movie data, providing users with a curated movie-watching experience
- 

## SKILLS

- Language : Javascript, Typescript, HTML, CSS
  - Frameworks: React, TailwindCSS, AntDesign
  - Backend Technologies: NodeJS, ExpressJS, MongoDB
  - Libraries: Redux Toolkit, RTK Query, React-hook-form, Zod validations
  - Tools: Postman, Gitlab, Confluence, Jira
-
